

Science at

At Castle Hills, we understand the importance that science plays in our futures and our lifelong learning.

We encourage inquisitive, creative scientists, who understand the world around us, by acquiring scientific knowledge and conceptual understanding that is needed in a rapidly changing world. Science is good when ...

We can be explorers and investigate what is around us.

We have the opportunity to ask questions and be scientific speakers.

We work together so we can practically and creatively solve real world problems.

We can make links in our science subjects with our other learning.

We are challenged in our thinking and our skills.

Which aspect of science do you enjoy the most?

predicting whats going to happen

Which is your favourite science topic?

Human body

senses

plants

seasons

materials
